

Xpedium has pre-configured several standard solutions which include a rich feature set of tested modules and workflows based on proven customer implementations. These Ready-to-Work solutions have both common and unique feature sets that can be rapidly adapted to your unique businesses processes.

READY-TO-WORK PICKUP & DELIVERY

All Ready-to-Work solutions are supported by the Xpedium xLink Mobility Connector for integration into back-office ERP solutions as well as Xpedium vehicle tracking and vehicle information systems. Options such as wired or wireless communications, GPS, bar code scanning, thermal or impact printing, camera/imaging, RFID, and many other peripherals and web services can also be implemented. Xpedium currently offers Ready-to-Work applications for DSD Sales Delivery & Merchandising, Field Sales and Merchandising, Pickup and Delivery, and Inspections and Asset Management.

XMOBILITY SOLUTIONS | PICKUP & DELIVERY.

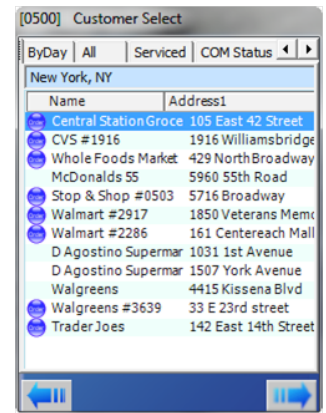

Xpedium's Ready-To-Work Pickup & Delivery application is designed to address the ever changing challenges transportation organizations face in getting the most from their fleet assets while delivering the best possible customer service. Our solutions enable businesses to gain more driver time, optimize delivery sequences, shorten billing cycles, minimize errors and dramatically improve package tracking while also giving drivers the tools to perform their tasks with ease, thus helping to insure driver retention.

Considering the dynamic nature of supply chain execution and external influences such as fuel costs, government regulations and customer requirements, quick turnaround and cost effective change or addition of further enhanced technology will be critical in the years ahead. The Xpedium solution brings a fresh approach to traditional fleet and delivery management solutions. The Microsoft .Net applications are ready-to-work but also offer the flexibility for customization through the xMobility Development Suite. This open systems approach delivers a solution that both lowers total cost of ownership and protects against obsolescence.

In addition, while many feature requirements are common across operations, the Xpedium solution can accommodate and scale across the operational nuances of Over-The-Road Carriers, LTL, and Local or Regional Delivery. The .Net architecture also allows the effective use of a wide range of mobile devices ranging from smart phones to industrial grade PDA-type handhelds providing the right fit of technology and at the right price.

Daily activities can all be accessed from the Main Menu.

Customer Select screen displays planned stop under the Today tab.

- ▶ The Ready-to-Work xMobility Pickup & Delivery application provides comprehensive functionality including:
